Tree Planting Detail

Stake only when absolutely necessary.

Mulch should be applied but should not exceed three inches in-depth nor should it come in contact with the tree.

Prune only dead, weak, poorly formed or diseased branches.

Top of ball is level with existing soil or one inch higher.

Dig a hole as wide as possible. Back fill should be the same soil as removed when hole was dug.

Root ball must sit on hard surface.

Remove any rope, wire, tags, plastic, and burlap.

Either remove or roll down wire basket and burlap into the bottom of the hole.
